Profile

A result and quality oriented software engineer experienced in building reliable SaaS platforms, payment systems and internal tools. Strong in Front-End and Full-Stack development, with a focus on clean architecture, performance and delivering features quickly and collaboratively.

Experience

OpenPay — Software Engineer

Aug 2024 - present

Python | Fast API | React.js | Next.js | SDK Development | Payment Library Client

OpenPay is a payment orchestration platform for subscription businesses

- Designed, developed and maintained the embedded payment element client library and hosted checkout page, enabling flexible payment configuration and serving as the main access point for all OpenPay transactions.
- Built and optimized integrations for Apple Pay, Google Pay, Direct Debit and Crypto across multiple processors, contributing to about 50% of all processed payment volume.
- Developed processor agnostic APIs and contributed to the OpenPay SDK to ensure consistent behavior across different processor backends.
- Implemented PCI compliant payment flows, improving security and reliability across checkout experiences.
- Integrated analytics for internal metrics and observability, including latency tracking, event monitoring and developer focused instrumentation to improve issue detection and debugging speed.

getopenpay.com

Seak — Fullstack Engineer

March 2024 - August 2024

React Native | Django | Google Cloud Platform | Cron Jobs | Postgres SQL

Seak connects global retailers with Southeast Asian artisans to support small businesses and promote fair trade.

- Built Seak's Supplier Mobile App from scratch using React Native, including UI screens, navigation, offline handling and API integrations.
- Worked closely with leadership, suppliers and designers to define features, gather feedback and refine user journeys during beta testing.
- Developed Django based REST APIs to power the app and created background jobs for notifications and automated product publishing.
- Improved data models and API performance to ensure smooth usage in low connectivity areas.
- Contributed to overall system design discussions and proposed improvements for scalability and app reliability.

Experience

Codigo / Rezerv — Lead Front-End Developer

Jun 2022 - Feb 2024

Mentoring | Code Review | AWS | Next.js | React.js

Rezerv is a management platform for service based businesses, offering online booking, scheduling, payments, customer management, analytics and marketing tools.

- Built functional, reliable and user focused interfaces based on UI designs, delivering features for the B2B portal, B2C website, mobile app and various internal tools.
- Led a team of six Front-End developers, collaborating closely with the Project Manager to plan sprints, distribute tasks and estimate timelines.
- Mentored developers and conducted thorough code reviews to maintain code quality, improve team capability and ensure long term stability of the codebase.
- Worked with backend and design teams to refine workflows, resolve blockers and ensure smooth delivery across projects.
- Contributed to frontend performance improvements and deployment workflows on AWS for consistent production delivery.

rezerv.co

Bilions — Front-End Developer (Part-time)

Oct 2021 - Jun 2022

Vue.js | Tailwind CSS | Typescript | Dart | Flutter

Bilions was a small software house building apps and websites for local businesses.

- Built user facing screens for multiple products, including a tele medicine app, e commerce storefront and POS dashboard.
- Delivered responsive and performant UI across mobile and web projects within tight timelines.

Partner Associates — Junior Application Developer

Jan 2021 - Jun 2022

JavaScript | Node.js | jQuery | SASS

Partner Associates Intl. is a digital solutions provider serving enterprise clients and government projects.

- Designed and implemented UI for enterprise tools to improve accessibility and usability.
- Built performant Front-End features using modern web technologies and supported backend integration.
- Contributed to team learning through UI/UX and new Front-End technology adoptions

Featured Projects

Seak Seller App

React Native | Expo | EAS | Django | GCP | Postgres SQL | React Hook Form | Valibot

A cross-platform native app for product suppliers to create and manage products listed on US wholesale marketplaces. The app is multilingual (TH, EN) and includes AI-assisted product title and description enhancement for better SEO.

Seak App on Play Store

Rezerv Platform

React.js | MUI | Next.js | TanStack Query | Typescript | Yup | React Hook Form

Rezeve is an SaaS, tailor-made for all service-based businesses. I've contributed awesome features such as Scheduler, Theme Customization, Reports and Automated marketing.

Featured Projects

Burmese Content

Preact · Vite · Figma API · Open Source

A figma plugin for filling sample content for Burmese UI/UX designers. This helps saved a lot of time for designers who have to fill their interfaces with sample data. The plugin allows filling data with 1 click saving time for searching and copy-pasting data.

QR-X

Next.js · Turborepo · ES Build · Developer Experience · NPM · Solid.js · Svelte · Open Source

QR-X is an Open Source project build by a team of developers. It is a QR generator library for all web frameworks (React, Vue, Svelte, Solid). I'm the core contributor and handling the SVG path generation, matrix transformation to produce high quality QR codes and design APIs for optimal developer experience.

qr-x.devtrice.dev

Figify

Preact · Vite · Figma API · Open Source

A minimal Figma plugin starter template using Preact and TailwindCSS bundled with Vite. This allows type-safe actions to communicate with Figma window and an easier and faster way to develop figma plugins.

Education

B.Sc. Computing — University of Greenwich

Jun 2024 - Jul 2025

The program covers core subjects needed for modern software development lifecycles. Key areas include Requirement Management, Human Computer Interaction, Mobile Development and Enterprise Web Development.

Diploma in Computing — NCC Education

Jan 2023 - Jan 2024

After taking an academic break during the covid-19 period, this program became the starting point for returning to a degree path. Studied Network Security, Information System Analysis, Database Administration, Web Development and Information Systems Analysis.

B. C. Sc. Foundation — University of Computer Studies, Yangon

Nov 2018 - March 2020

My first university, where I studied foundations of computer science, hardware concepts and basic software development. After completing the third semester, I took a break and later moved toward a new academic direction.
